Connector technology	M8 copper nickel-silver plated brass insert			
Shape of plates	flat			
Plate material	pure lead at 99,9%			
Separator	AGM (Absorbent Glass Mat)			
Electrolyte	absorbed			
Case material	high-strength polypropylene			
Operating temperature	-15/+40°C

STANDARD FLOODED BATTERY VS AGM

	Flooded battery	AGM Battery
Strength	-	+++ better circulations of the ions/ less internal resistance
Charging/discharging speed	-	+++ better circulations of the ions/ less internal resistance
Load resistance	- higher self-discharge	+++ lower self-discharge
Deep discharge	---	++ possible up to 80% with imperative charging afterwards
Heat emission	strong	weak less internal resistance
Storing	- needs a well ventilated area (Hydrogen release)	+++ very weak hydrogen release
Transportation	---	++ electrolyte absorbed by the glass mat
Resistance to shocks and vibrations	- more fragile	+++ tightly fixed compressed sheets
Resistance to cold	- risk of freezing	+++ no liquids

* compared to most AGM batteries on the market

AGM Sealed battery for maximum security

Higher charge/ discharge cycling capacity compared to other AGM batteries on the market x 2

High discharge rates (imperative recharging afterwards) 80%

Longer lifespan than other AGM batteries x 2

Low self-discharge

Advanced technological design (pure lead, carbon additive, machine pressed high density grid)

Possible inclination (until 30°)

UNIBAT AGM Batteries

HIGH EFFICIENCY

Equipped with an advanced technological design (compressed high density pure lead grid, highly absorbent glass mat, carbon additive ...) UNIBAT AGM batteries perform up to 2 times better in cycling and lifespan than most batteries of the same category on the market.

Thanks to their unique internal design, UNIBAT AGM batteries can accept discharge rates up to 80% to make the most of the available energy. Their weak self-discharge guarantees a good stability over time.

Its AGM technology guarantees safe use without leaks or gas release.
